

CANINE FLEX SUPPORT

*Wear and tear of joints and surrounding tissues, especially in very active and aging dogs, can cause stiffness and trigger their body's normal inflammatory response function. **Canine Flex Support** helps maintain healthy joint function, including support for the cartilage. It provides nutrients that: Moderate the body's normal inflammatory response, provide potent natural antioxidants, and support healthy immune modulation.*

Indications for use:

- General joint support
- Senior animals
- Maintenance: especially for large breeds, performance dogs, and growing puppies
- Short- or long-term support: for any dog with joint challenges, especially for active or aging dogs

Systems Supported:

- Joints
- Cartilage

Whole Food Ingredient Sources:

- **Vitamin E complex** –wheat germ oil
- **Omega-3 Fatty Acids** – Tuna Oil Powder

Individual Ingredients:

- **Glucosamine** – Glucosamine is a natural compound that is involved in forming cartilage. It helps stimulate cartilage growth and maintain joint health
- **Chondroitin sulfate** – Chondroitin is a major component of cartilage and keeps it healthy by absorbing fluid into the connective tissue. It provides the building blocks for the body to produce new cartilage.
- **Wheat germ oil** – Richest source of vitamin E complex which protects nerve cell membranes from free radicals
- **Tuna oil powder** – Contains omega-3s which moderate the body's normal inflammation response and support healthy immune system function
- **Ginger** – Moderates the body's normal inflammation response
- **Turmeric** – Supports a healthy inflammatory response and provides antioxidant benefits
- **Liver powder** – Enhances palatability
